

World Energy Review 2021

Reflecting and highlighting the ongoing energy transition process, the World Oil, Gas and Renewables, now at its 20<sup>th</sup> edition, turns into **World Energy Review**, a single document that, by tracking the main changes in the energy sector in 2020, aims to be a useful tool for their understanding.

The **World Energy Review** is split into three sections. The first one revolves around oil with a special focus on the evolution of crude oil quality and the refining industry. The second section offers an overview about the natural gas market and the third one is about the main renewable sources (solar and wind power).

Due to COVID-19 pandemic, in 2020 the energy sector faced unprecedented challenges. It was the first year of energy reduction since 2009 and the largest contraction since the Second World War.

- In 2020 world oil demand collapsed (nearly 9% vs 2019). Brent price fell to its lowest level in over 15 years (average 41.7 \$/b) and sometimes hovered below 20 \$/b. For the first time in history, US crude oil, WTI, dropped even below zero for one day.
- To face the reduction in demand, OPEC+ implemented record cuts in crude oil production. At the same time, the contraction in prices also led to a fall in non-OPEC production.
- World oil production declined by 6.5% in 2020, affecting all categories of crude and substantially freezing the average quality.
- In 2020 global gas demand decreased after 10 years of growth (-1.5% vs 2019), mainly driven by North America (-4.1%), Russia (-3.2%) and Europe (-2.6%). Meanwhile China showed a remarkable increase (+6.5%), among the top-10 gas consuming countries, and confirmed itself as the 1<sup>st</sup> world importer.
- Global gas production interrupted the positive trend of the last 10 years with a contraction of 2.8% in 2020 vs 2019, largely due to Russian (-6%) and US (-2.5%) declines.
- Despite the pandemic impact on gas demand, LNG kept on increasing its share on total traded natural gas reaching 40% (38% in 2019). In 2020, 484 bcm of LNG were traded, of which over 70% imported by Asian countries. Over the last year, US increased its LNG exports by 59%.
- In 2020 wind expansion almost doubled compared to 2019 (+111 GW vs +58 GW), bringing global wind capacity to 733 GW (+17.8% vs 2019). China led the expansion (65% of new additions), followed by the US (13%).

• Solar energy continued to dominate renewable capacity expansion with 127 GW of new installations. Total solar capacity has now reached about the same level as wind capacity thanks largely to expansion in China (49 GW).

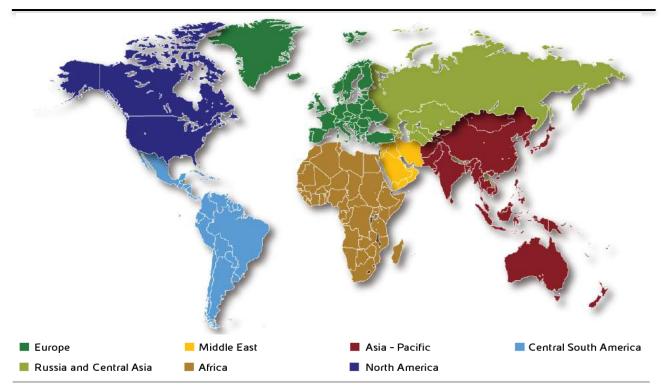

Claudio Descalzi

Chief Executive Officer and General Manager

#### List of Countries:

- Europe: Albania, Austria, Belarus, Belgium, Bosnia Herzegovina, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Gibraltar, Greece, Hungary, Iceland, Ireland, Italy, Kosovo, Latvia, Lithuania, Luxembourg, Malta, Moldova, Montenegro, Netherlands, North Macedonia, Norway, Poland, Portugal, Romania, Serbia, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey, Ukraine and United Kingdom.
- Russia and Central Asia: Russia, Armenia, Azerbaijan, Georgia, Kazakhstan, Kyrgyzstan, Tajikistan, Turkmenistan and Uzbekistan.
- Middle East: Bahrain, Iran, Iran,
- Africa: Algeria, Angola, Benin, Cameroon, Chad, Congo, Côte d'Ivoire, Dem. Rep. Congo, Egypt, Equatorial Guinea, Ethiopia, Gabon, Ghana, Kenya, Libya, Madagascar, Mauritania, Morocco, Mozambique, Namibia, Niger, Nigeria, Rwanda, Senegal, Sierra Leone, Somalia, South Africa, South Sudan, Tanzania, Tunisia, Uganda, Zambia and Zimbabwe.
- Asia Pacific: Afghanistan, Australia, Bangladesh, Brunei, China, East Timor, Hong Kong, India, Indonesia, Japan, Malaysia, Mongolia, Myanmar, Nepal, New Zealand, North Korea, Pakistan, Papua New Guinea, Philippines, Singapore, South Korea, Sri Lanka, Taiwan, Thailand and Vietnam.
- Americas: North America and Central South America.
- North America: Canada and the United States.
- Central South America: Argentina, Barbados, Belize, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Curacao, Dominican Republic, Ecuador, El Salvador, Guatemala, Guyana, Haiti, Honduras, Jamaica, Mexico, Nicaragua, Panama, Paraguay, Peru, Suriname, Trinidad and Tobago, Uruguay and Venezuela.
- European Union: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and United Kingdom.
- OECD: Australia, Austria, Belgium, Canada, Chile, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Latvia, Lithuania, Luxembourg, Mexico, Netherlands, New Zealand, Norway, Poland, Portugal, Slovakia, Slovenia, South Korea, Spain, Sweden, Switzerland, Turkey, United Kingdom and United States.
- OPEC: Algeria, Angola, Congo, Equatorial Guinea, Gabon, Iran, Iraq, Kuwait, Libya, Nigeria, Saudi Arabia, United Arab Emirates and Venezuela.
- MENA (Middle East and North Africa): Bahrain, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syria, United Arab Emirates, Yemen and Algeria, Egypt, Libya, Morocco and Tunisia.

This Review adopts the most commonly used names for countries and not necessarily the official name.

The names used do not in any way indicate the opinion of Eni on the legal status of countries, territories, cities or areas mentioned. The term "country" is used to indicate, when necessary, also a territory or area. Borders between countries are indicated on the maps and do not imply judgement of any kind or the position of Eni with regard to current international disputes.

A full year is required to consider a country outside or inside an international aggregate.

This Review has been prepared by the Economy, Market Scenarios and Strategic Options Department.

# Notes and Methods

# Oil

The sources of the data are: CME, DECC, EIA DOE, Enerdata, Energy Intelligence, ICE, ICIS Consulting, International Energy Agency, IHS Global Insight, Italian Ministry for Ecological Transition, JODI, Norwegian Petroleum Directorate, Oil & Gas Journal, OPEC, S&P Global Platts, Wood MacKenzie and other official sources.

In all the chapters of oil, in some countries figures may include oil from non conventional sources and others sources of supply.

The figures for **'Reserves'** refer to proven reserves as at 31st December. The figures for other chapters indicate annual averages.

Blank spaces in the tables indicate that the figure was not available, zero indicates a figure that is not significant (except for the chapters **'Production Quality'** where "zero" is used for both not available and not significant figures). Totals may differ from the sum of the individual figures as a result of rounding up/down. Percentages have been calculated before rounding.

#### Supply and Demand

#### Trade and Prices

The difference between the Consumption and the Production of oil is given by the change and stocks, the processing gains obtained in refining and the amount of biofuels which is not included in Production.

In all the chapters, the list of the "The world top 10..." is drawn up by ordering the countries on the basis of the last available year. In the chapters "Reserves/Production Ratio" and "Production/Consumption Ratio", the list of the "The world top 10..." is drawn up by selecting the largest producers in the last available year and ordering them on the basis of the value of the reserves/production and production/consumption ratio. In the chapter "Per Capita Consumption", the list of the world top is drawn up by selecting the largest consumers in the last available year and ordering them by the value of per capita consumption.

#### **Production Quality**

In the chapter **'Production Quality'** figures for total oil production in each area or country do not coincide with the figures in the **'Production'** chapter of the Review. This is due to the exclusion of natural gas liquids and extra heavy crude from the figures for the first (except for Venezuela). Moreover, it has not been possible to allocate or define total production. In some countries the 'Ultra Light' category also includes, in total or in part, the production of condensates. For Canada the production includes syncrude.

API degree is used universally to express a crude's relative density. The arbitrary formula used to obtain it is: API gravity =  $(141.5/SG \text{ at } 60^{\circ}F) - 131.5$ , where SG is the specific gravity of the fluid. Lighter the crude, higher the API gravity. The API scale was designed so that most values would fall between 10 and 70 API gravity degrees. Fresh water has an API density of 10.

Atmospheric distillates yields are obtained according to TBP (True Boiling Point) technique, ASTM D2892 procedure. Figures are expressed in mass percentage.

For the definition of the qualitative parameters for single crudes, the data of "Eni-R&M downstream laboratories" have been used, wherever possible. Quality levels, indicating API gravity and sulphur content, are defined as follows.

#### Quality levels - API gravity and sulphur content

Ultra Light Light & Sweet Light & Medium Sour Light & Sour	API level equal to or greater than 50° and a low sulphur content API level equal to or greater than 35° and less than 50°, sulphur content less 0.5% API level equal to or greater than 35° and less than 50°, sulphur content equal to or greater than 0.5% and less than 1% API level equal to or greater than 35° and less than 50°, sulphur content equal to or greater than 1%
Medium & Sweet Medium & Medium Sour Medium & Sour	API level equal to or greater than 26° and less than 35°, sulphur content less 0.5% API level equal to or greater than 26° and less than 35°, sulphur content equal to or greater than 0.5% and less than 1% API level equal to or greater than 26° and less than 35°, sulphur content equal to or greater than 1%
Heavy & Sweet Heavy & Medium Sour Heavy & Sour	API level equal to or greater than 10° and less than 26°, sulphur content less 0.5% API level equal to or greater than 10° and less than 26°, sulphur content equal to or greater than 0.5% and less than 1% API level equal to or greater than 10° and less than 26°, sulphur content equal to or greater than 1%

#### Refining Industry

The **"Refining Capacity"** set of tabulations provides the following information:

- Refineries: includes asphalt and lube oriented units, when dedicated topping capacity is present. Condensate refineries are included.
- Primary Capacity: represents a pro rated annual average of available capacity, excluding turnarounds.
- Conversion Capacity (FCC eqv.): sum of conversion capacity, converted to "Catcracking (FCC) equivalent" capacity. "FCC equivalent" capacity equals 1; other conversion capacities can be higher or lower than 1 (the equivalent factors are reported below in the next table).
- Complexity Ratio FCC eqv.: ratio of Conversion Capacity (converted to FCC equivalent) over Primary Capacity, calculated on a weight basis. The higher is the complexity index, the higher is the capability of a refinery to produce high equivalent quality and value products.
- Complexity Ratio NCI (Nelson Complexity Index): is another measure of secondary conversion capacity in comparison to the primary distillation capacity. The units are rated in terms of their costs relative to the primary distillation unit. The higher is the index the higher is the capability of a refinery to produce high quality and value products.

The equivalent factors for the FCC equivalent calculation, reported below, change according to the type and the configuration of the conversion unit and are from ICIS Consulting. The factors for the Nelson calculation are standard factors, modified as necessary by Eni. Oxygenates and Aromatics are excluded.

Conversion type			Conversion type				
Alkylation	0.00	10.00	Hydrodesulf-diesel	0.00	2.50

# **Natural Gas**

# Renewables

The sources of the data are: Cedigaz, DECC, EIA DOE, Enerdata, International Energy Agency (IEA), International Renewable Energy Agency (IRENA), IHS Global Insight, Italian Ministry for Ecological Transition, Norwegian Petroleum Directorate, Oil & Gas Journal, OPEC, Wood MacKenzie and other official sources.

Blank spaces in the tables indicate that the figure was not available, zero indicates a figure that is not significant (except for the two chapters "Imports by Country of Origin" and "LNG Liquefaction and Regasification Capacity" in the section "Natural Gas" and for the whole section "Renewables").

Totals may differ from the sum of the individual figures as a result of rounding up/down.

Percentages have been calculated before rounding.

In all the chapters of natural gas, the figures of some countries may include natural gas from non conventional sources and others sources of supplu.

The figures for **'Reserves'** of natural gas refer to proven reserves as at 31st December. The figures for other chapters indicate annual averages.

In the chapters "Production", "Consumption", "Exports" and "Imports" of natural gas, figures are assessed by using the same calorific value per cubic metre (40 MJ/cm, GCV), in order to make data among countries comparable.

In the chapter **'Production**" of natural gas, the figures concern traded production and do not include quantities of flared, dispersed or re-injected gas.

In the chapter "Imports" of natural gas, the figure reported as total imports for a single country may differ from the sum of "Imports by LNG and pipeline" for the same country, because of the different sources and different calorific attached to the cubic metre. The imports of liquefied natural gas cover only the dry marketable equivalent after regasification.

In all the chapters, the list of the "The world top 10 or 5..." is drawn up by ordering the countries on the basis of the last available year. In the chapters "Reserves/Production Ratio" and "Production/Consumption Ratio" of natural gas, the list of the "The world top 10..." is drawn up by selecting the largest producers in the last available year and ordering them on the basis of the value of the reserves/production and production/consumption ratio. In the chapter "Per Capita Consumption" of natural gas, the list of the world top is drawn up by selecting the largest consumers in the last available year and ordering them by the value of per capita consumption.

In the chapter "Trade and Prices" of natural gas, the annual averages of gas prices are calculated by taking into account the delivery period of the quotations.

 $<sup>^{(**)}</sup>$  When 2020 data is missing, the figure refers to the latest available years.

#### 2020

World: 2,485 thousand barrels/day

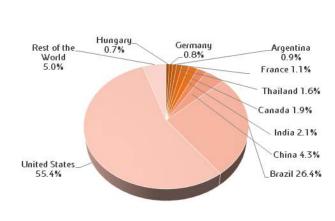

#### Biogasoline(\*)

(thousand barrels/day)

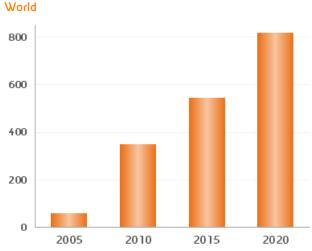

2020

World: 1,640 thousand barrels/day

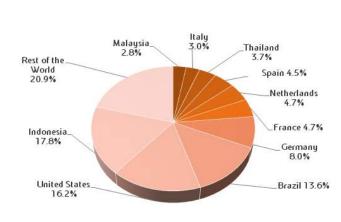

Biodiesel<sup>(\*)</sup> (thousand barrels/day)

2020

World: 819 thousand barrels/day

<sup>(\*)</sup> Data source: IEA (2021) Extended Balances and EIA DOE. All rights reseved.

Total Biofuels include biogasoline (also ethanol used pure in Brazil "Hydrous"), biodiesel and other liquid biofuels.
